

Opening a Future of Imagination Together

Create Your Own Storybook with AI

A I S t o r y C r e a t i o n

Program Overview

A Story-Making Class Powered by AI

A creative learning experience where children's imagination meets AI.

This program guides children to create their own stories while interacting with AI.

Based on each child's ideas and choices, AI suggests plot directions and scene options, and the child edits and shapes the story into a complete narrative.

The finished story is illustrated with AI-generated images and produced as a 10-page digital storybook (PDF).

Through this process, children develop stronger writing skills and creative expression as they complete a storybook of their own.

Key Learning Activities

- Story structure, character creation, and scene expression
- Story flow completed through AI conversation
- Automatic illustration generation

Structured Learning Curriculum

- An 8-step path from concepts to story completion
- A process that builds creative thinking
- Activities focused on making a personal storybook

Application & Class Settings

- Elementary classes & after-school programs
- Creative writing, integrated learning, AI experience classes
- Schools, libraries, cultural centers

Ease of Use & System Features

- Intuitive interface for young learners
- Teacher-friendly class structure
- Automatic output, management, and storage

Learning Goals

AI Creative Learning

A class that expands children's ideas into stories and illustrations.

The AI Storybook Program builds children's ability to think and express independently through story creation and image generation. AI supports this process by helping structure and visualize the child's ideas. Through completing their own story and illustrations, children develop creativity, literacy, and expressive skills in a balanced way.

Enhancing Creative Thinking

Children explore new story flows through conversations with AI.

Expressing and shaping ideas strengthens imagination and original problem-solving.

Strengthening Writing & Literacy Skills

As children organize plots and form sentences, they naturally learn the foundations of writing.

By refining expressions with AI suggestions, their literacy and story-building skills improve together.

Growing Visual Expression Skills

Generating images teaches children to visualize their ideas.

Scene choices and character selection deepen visual storytelling skills.

A Learning Experience Centered on Achievement

Finishing a storybook built from their own ideas provides real accomplishment.

The final product boosts motivation and confidence in creative work.

Learning Structure

AI Storybook Creation Process

A brief look at the steps from start to final storybook

The AI Storybook Program follows a step-by-step structure that expands a child's ideas into stories and images. Each stage centers on the child's choices and expressions, while AI supports as a guide throughout the process.

1) Idea Setting

Children choose themes, characters, and moods based on their interests. This becomes the foundation of the story.

2) Building the Story Structure

AI analyzes the child's input and suggests plot flows and scenes. The child edits and shapes these into a personal story structure.

3) Writing and Expression

Children create sentences that match each scene and refine wording for clarity. This builds narrative and writing skills.

4) Scene Illustration

AI generates illustrations for each scene based on the story. Children select colors, composition, and tone to enhance visual quality.

5) Storybook Editing

Text and images are arranged into pages to form a complete storybook layout. The flow and placement are organized for a natural reading experience.

6) PDF Creation & Saving

The finished storybook is exported and saved as a PDF. Children gain a sense of achievement as their work becomes a complete creation.

Creative Learning Path

Through interaction with AI, children experience how their ideas can be structured and completed as a storybook.

Educational Impact & Value

How the AI Storybook Creates Change

This section shows learning effects confirmed in classrooms.

The AI Storybook Program is designed to enhance students' creativity, expression, and engagement. It provides more than a simple digital experience—students transform their own ideas into completed works. For teachers, it reduces preparation burden while offering clear, observable learning outcomes.

Key Learning Benefits

Practical Application Cases

2025 University-Linked SW·AI Specialized Program (Taeon / Boryeong)

2025 SangSangNeulbom Program

2025 Gongju National University of Education Neulbom Camp
